

PHENYL-INDOLE COMPOUNDS FOR MODULATING IgE AND INHIBITING CELLULAR PROLIFERATION

Abstract of the Disclosure

The present invention is directed to small molecule inhibitors of the IgE response to allergens, which are useful in the treatment of allergy and/or asthma or any diseases where IgE is pathogenic. This invention also relates to phenyl-indole molecules that are cellular proliferation inhibitors and thus are useful as anticancer agents. This invention further relates to small molecules which suppress cytokines and leukocytes.
